

EDUCATION

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
M.Tech. CSE	Indian Institute of Technology Indore	7.65	2025–Present
B.Tech. CSE	Delhi Technological University	8.49	2020–2024

Technical Skills

Languages: JavaScript, C++, Python

Technologies/Frameworks: React.js, Next.js, Node.js

Databases: MongoDB, PostgreSQL, MySQL

Relevant Coursework: Data Structures, SQL, Database Management, OOPs

Experience

Innovaccer

Noida, India

Application Engineering Intern

Jul. 2024 - Dec. 2024

- Built a custom query API for 200+ admins to manage 10K+ MongoDB records. Implemented RBAC, validation, and CSV export, reducing manual operations by 40%.
- Improved a HIPAA-compliant notes platform serving millions of patients and thousands of care managers. Streamlined documentation workflows, increasing engagement by 150%.
- Re-architected the Workqueue system and unified Risk APIs into a cache-backed service; reduced triage time by 96%, improved load times by 63%, lowered latency by 30%, and increased daily call throughput by 45%

M.N Software Pvt.Ltd

Kathmandu, Nepal

ReactJS Intern

Jun. 2023 - Jul. 2023

- Engineered scalable, modular React UI components in an 8-member agile team, delivering 40+ reusable components and reducing development time by 90% across multiple modules.
- Optimized frontend performance via code-splitting, lazy loading, and memoization, achieving 43% faster load times and 78% improved responsiveness.

Projects

SubhaYatra

Website-Link

Intelligent Tourism Recommendation System for Nepal

2025-2026

- Created a content-based recommendation engine (K-Means $k=5$ + cosine similarity) on a 1,058-record dataset, delivering Top-10 results in <2s with cold-start support across 5 filters.
- Processed 2,700+ raw entries into ML-ready schemas (places, hotels, transport, events), boosting visibility of 150+ under-represented destinations by 40%.
- Developed a full-stack system (React.js, Flask, SQLAlchemy) with 20+ APIs covering 1,000+ entities; implemented secure auth (JWT/bcrypt, Clerk) and optimized performance with CORS/XSS protection and analytics dashboard.

Pneumonia Detection using Vision Transformer (ViT)

Github-Link

PyTorch, Hugging Face Transformers, OpenCV

2026

- Trained a pneumonia detection system using Vision Transformer (ViT) and PyTorch on 5.8K+ chest X-ray images, achieving 97.2% accuracy and outperforming CNN baselines.
- Applied preprocessing, augmentation, and fine-tuning with Hugging Face Transformers; generated attention maps for interpretable AI-based pneumonia classification.

Achievements

HJBSS Scholarship, Fully funded M.Tech (CSE), IIT Indore — Govt. of India

2025–2027

ICCR Scholarship, Fully funded B.Tech (CSE), DTU Delhi — Govt. of India

2020–2024
